1. Antecedents: Strategies to Prevent Misbehavior

Teachers have the greatest array of options to influence a student to engage in positive behaviors when they focus on antecedents: actions they take before the student behavior occurs. Proactive antecedent actions to encourage desired behaviors are often quick-acting, can prevent misbehavior and attendant interruption of instruction, and usually require less teacher effort than providing corrective consequences after problem behaviors have occurred. Teacher strategies to elicit positive student behaviors include making instructional adjustments, providing student prompts and reminders, and teaching students to monitor and evaluate their work performance. Here are specific antecedent ideas that teachers can use to ‘nudge’ students to engage in desired behaviors:

**Antecedents That Prevent Problem Behaviors**

- **ADHD:ODD:GAD:** Behaviors: Teach Expectations (Fairbanks, Sugai, Guardino, & Lathrop, 2007). Students must be explicitly taught behavioral expectations before they can be held accountable for those behaviors. The teacher should model positive behaviors, give students examples and non-examples of appropriate behaviors to clarify understanding, have students practice those behaviors with instructor feedback; and consistently acknowledge and praise students for successfully displaying positive behaviors.

- **ADHD:ODD:GAD:** Instructional Match: Ensure the Student Can Do the Work (Burns, VanDerHeyden, & Boice, 2008). Student misbehavior frequently arises from an inability to do the academic task. When the student lacks skills necessary for the academic task, the instructor teaches the necessary skill(s). Additional strategies include adjusting the immediate task to the student's current skill(s) and pairing the student with a helping peer.

- **ODD:** No: Substitute a Preferred Alternative (Mace, Pratt, Prager, & Pritchard, 2011). If the student has a pattern of misbehaving when told that he or she cannot access a desired item or engage in a preferred activity, the teacher can use the ‘no with preferred alternative’ strategy. The teacher prepares by making a list of activities or items preferred by the student that are allowed during the academic situation or setting where problems arise. Then, whenever the student requests an item or activity that is not allowed, the teacher (1) tells the student that he or she cannot access the desired activity or item; (2) provides a brief explanation of why the requested item or activity is off-limits; and (3) immediately offers the student one or more items or activities from the prepared list that are allowable in the current situation or setting.

- **ADHD:ODD:** Relocate the Student: Remove From Temptation (US Department of Education, 2004). When the student’s problem behaviors are triggered or supported by factors in the environment--such as a talkative peer or difficulty hearing or seeing the instructor--the teacher may choose to move the student to another, less-distracting location in the classroom. A good option is to seat the student within the teacher’s ‘action zone’, close to the instructor and in the region of the room toward which that educator directs most instruction.

- **ADHD:ODD:** Schedule: Increase Predictability (Kern & Clemens, 2007). When students know the “content, duration, and/or consequences of future events” (Kern & Clemens, 2007; p. 67), their level of engagement rises and problem behaviors decline—a good definition of motivation. A strategy to increase the predictability of events for individual students or an entire classroom is to post or otherwise provide a schedule outlining the day’s classroom activities. In simplest form, such a schedule lists a title and brief description for each scheduled activity, along with the start and end times for that activity. Teachers may wish to add information to the schedule, such as helpful reminders of what work materials a student might need for each
event. Students who have difficulty interpreting a written schedule may benefit from having their schedules read aloud and/or from having pictorial equivalents included in their schedules.

- ODD:GAD: **Work Break: Make It Available on Request** (Majeika et al., 2011). Sometimes misbehavior is an attempt by the student to engineer a break from an academic task. The teacher can choose an alternative method for the student to use to communicate that he or she would like a brief break, such as requesting that break verbally or pulling out a color-coded break card. Of course, the student will also require clear guidelines on how long the requested break will last and what activities are acceptable for the student to engage in during that break.

### Antecedents That Encourage Goal Behaviors

- ADHD:ODD:GAD: **Checklist for Academic Skills: Make the Complicated Simple** (Alter, Wyrick, Brown, & Lingo, 2008). When the student must apply several steps to complete a complex academic task, the teacher can give the student a checklist detailing each step and instructions for completing it. Before the activity, the student is prompted to preview the checklist; after the activity, the student uses the checklist to review the work.

- ADHD:ODD:GAD: **Checklist for Challenging Situations: Script Transition Times** (McCoy, Mathur, & Czoka, 2010). Students often struggle with the complexity of managing multi-step routines such as transitioning between classroom activities or moving to different locations within the school. Teachers can assist by making up step-by-step checklists that ‘walk’ the student incrementally through the routine. Instructors can use these checklists as guides to teach and measure student success in navigating transitions. Just as important, the student can use the checklist as a prompt and guide to follow the expected steps.

- ADHD:ODD:GAD: **Choice-Making: Allow for Student Preference** (Green, Mays, & Jolivette, 2011). Students find it motivating to have opportunities to choose how they structure or carry out their academic tasks. Teachers can allow choice on any of a variety of dimensions of a classroom activity, such as where the activity takes place; who the child works with; what materials to work with (e.g., choosing a book from several options); when to begin or end the activity; or how long to engage in the activity.

- ADHD:ODD:GAD: **Fix-Up Skills: Foster Work Independence** (Rosenshine, 2008). During independent work, the student should know procedures to follow if stuck (e.g., cannot complete an item; does not understand a word in a reading passage). The teacher creates a routine for the student in how to apply ‘fix-up’ skills for independent assignments: e.g., “If I don't understand what I have read, I should (1) reread the paragraph; (2) slow my reading; (3) focus my full attention on what I am reading; (4) underline any words that I do not know and try to figure them out from the reading” (McCallum et al., 2010).

- ADHD:ODD:GAD: **Goal-Setting: Get a Commitment** (Martin et al., 2003). One tool to increase student motivation to perform an academic task is to have that student choose a specific, measurable outcome goal before starting that task. At the end of the work session, the student compares the actual outcome to the previously selected goal to judge success. For example, a student about to begin a writing task may choose the goal of locating 3 primary sources for a term paper. Or a student starting an in-class reading assignment might come up with two questions that he would like to have answered from the reading.

- ADHD:ODD:GAD: **High-Preference Requests: Build Behavioral Momentum** (Kern & Clemens, 2007). Use ‘behavioral momentum’ to increase compliance by first directing the student or class to complete several short,
simple, high-preference directives that they readily complete (e.g., "Take out a sheet of paper", "write your name on the paper", "copy the assignment from the board") before presenting the student or class with a low-preference directive that they typically balk at (e.g., "Open your books and begin the assignment").

ADHD:ODD:GAD: **Opportunities to Respond: Let Feedback Be Its Own Reward** (Partin et al., 2010). When students are academically engaged, they are usually also behaving appropriately. The teacher's goal, then, is to capture positive student behaviors by structuring lessons and work assignments to require a high rate of opportunities to respond (OTRs). In a complete OTR cycle, the student has an opportunity to respond (e.g., the teacher asks a question, or the student encounters an item on independent work), produces a response (e.g., the student responds to the teacher question or answers the work item); and receives timely performance feedback (e.g., the teacher says, "Right answer!", or the student uses an answer key to check a response).

An efficient way to boost OTRs classwide is through group responding (Haydon, Borders, Embury, & Clarke, 2009). Strategies for group response include choral responding; show of hands; pre-formatted response cards (e.g., with YES and NO written on opposite faces of the card); and individual white boards.

ADHD:ODD:GAD: **Positive Teacher Requests: It's How You Say It** (Braithwaite, 2000). Non-compliant students have a pattern of ignoring or defying teacher requests. However, instructors can increase the likelihood of student compliance by stating their requests in positive terms (e.g., "John, I can help you just as soon as you are back in your seat") rather than in negative terms (e.g., "John, I can't help you unless you are sitting in your seat").

ADHD:ODD: **Pre-Correction: Plant a Positive Thought** (De Pry & Sugai, 2002). Some students need a timely reminder of expected behaviors just before they transition into situations or settings in which problem behaviors tend to occur. At this ‘point of performance’, the teacher gives the student a timely reminder of goal behaviors, using such prompting strategies as stating goal behaviors, having the student preview a checklist of goal behaviors, asking the student to describe goal behaviors; or praising another student for demonstrating goal behaviors.

ADHD:ODD:GAD: **Response Effort: Reduce Task Difficulty** (Friman & Poling, 1995; Skinner, Pappas & Davis, 2005). The teacher increases student engagement through any method that reduces the apparent difficulty ('response effort') of an academic task - so long as that method does not hold the student to a lesser academic standard than classmates. Examples of strategies that lower response effort include having students pair off to start homework in class and breaking larger academic tasks into smaller, more manageable 'chunks'.

ADHD:ODD: **Rewards: Choose Them in Advance** (De Pry & Sugai, 2002). Just as the student is about to enter a challenging situation or setting in which he or she will need to show appropriate behaviors, the instructor reminds the student of the behavioral expectations and has the student select a possible reward from a menu. The student is later given that reward if behaviors were appropriate.

ADHD:ODD: **Verbal Commands: Keep Them Brief and Powerful** (Matheson & Shriver, 2005; Walker & Walker, 1991). Teacher commands are most likely to elicit student compliance when they (1) are delivered calmly, (2) are brief, (3) are stated when possible as DO statements rather than as DON'T statements, (4) use clear, simple language, and (5) are delivered one command at a time and appropriately paced to avoid confusing or overloading students. Effective teacher commands avoid both sarcasm or hostility and over-lengthy explanations that can distract or confuse students.
